

Why Buy a Jacto Sprayer?

Consider Performance

Jacto backpack sprayers pack more features in the lightest package available. With less than half the strokes of Solo to pump to 45 psi, they provide a more efficient application of chemicals. The hardworking piston pump is designed for continuous high output. It has been tested to over 1500 hours without degradation or failure. With the optional ECOvalve, these sprayers save on chemicals, produce a more consistent application for optimal results and reduce the number of pumps per gallon.

Consider Comfort

Weight saving is a major advantage in a backpack sprayer. The Jacto SP models are 1-1/2 to 2 pounds lighter than the Solos which mean the operator will be less fatigued at the end of the day. Add to that the wide shoulder straps with extra thick pads which provide superior comfort over the competitive Solo models.

Consider Convenience

Carrying the Jacto sprayers with the built-in handle makes for easier movement on the job site. The convenient wand/handle retainer clips and smaller footprint save valuable storage space on the truck or trailer. The larger tank base means there is less chance of tipping over and spilling valuable chemicals.

Consider Value

While Jacto backpack sprayers are competitively priced, what is most important is the value they provide over the competition. The superior features they offer over the popular Solo models make for a lower cost of operation over the long run. Operators want a sprayer that is reliable and easy to repair in the field and that's what Jacto delivers. A better value sprayer cannot be found!

Compare the Specifications and Features
